

Web assignment

AJAX

BOOTSTRAP

CORS

- In the REST assignment (link: [REST assignment](#))- add a web HTML page which fires ajax GET to the REST API customers.
The Get will be fired upon clicking on a button
Draw the results in a **Table** (like we did in previous lesson)

Example:

JQuery ajax get demo

JQUERY AJAX GET

ID	Name	Address	Email
1	danny	tel-aviv	danny@tel-aviv.com
2	marina	beer sheav	marina@beer7.com
3	david	herzeliya	david@hertzelyia.com

- Copy this HTML page into a vs-code and launch it using live-server. this should show the **CORS error**
Add a screenshot of the CORS error
- In the flask REST project, allow CORS
- Launch the HTML page again check that the CORS error disappeared
- Add **Bootstrap** decoration to the table

GOOD LUCK!
